AGUPURE BY AGUABEL

**Effective water disinfection
for industry & horticulture**

Water disinfection systems for professionals

Disinfected water is of crucial importance in many sectors. This importance will only increase in the future: after all, water will become scarcer and more expensive due to prolonged periods of drought. Conscious use of water, use of alternative water sources and smart water recovery is therefore a must now more than ever. Aguabel developed a unique technology for efficient and targeted water disinfection: Aguapure!

Pure water for numerous industries

From an industrial laundry to a horticultural company, recycling and wellness centre, etc. Aguapure is your partner for bacteriologically perfect water.

Aguapure appliances

We offer sustainable solutions for different sectors and capacities. Need a large installation for a specific project? Then several devices can be placed in parallel. The PLC controllers control everything.

AGUAPURE 100/200
 AG100 – one electrolysis cell (15A),
 AG200 – two electrolysis cells (30A)

Why choose Aguapure water disinfection?

-  **Pure technology**
Advanced disinfection technology for the purest form of water – made in Belgium.
-  **Efficient and energy saving**
Production of disinfectant gas only when needed. No storage which decreases the active substance.
-  **Safe for people and the environment**
No storage and transport of chemicals. Only electrolysis with pure refined salt.
-  **Sustainable & future-oriented**
Recycling and disinfection of cistern water, cooling water, etc. possible
-  **Maintenance friendly**
The fully automatic system works on the basis of pressure differences and gravity, resulting in low maintenance costs. Furthermore, salt needs to be added to the unit only sporadically.
